#### Novelty and inventive step

D1 describes a method for improving uneven surfaces of wood-based materials by heating an applied and smoothed coating material, during which process pores form under the smooth surface. A decorative coat can be bonded on during the setting process. D2 describes a similar method for the production of a composite material having a relief-type surface structure. D1 and D2 describe the use of a foaming adhesive for the coating of uneven substrates and for the application of a decorative film coat (see the passages cited in the search report). The subject matter

of claims 1-12, 14, 16-18, 20 and 21 is therefore anticipated in a manner prejudicial to novelty.

The other dependent claims do not appear to contain any additional features which, in combination with the features of any claim to which they refer back, satisfy the PCT novelty and inventive step requirements.
